# DELIVERY PERFORMANCE ANALYTICS

Delivery Performance Analytics is a consultancy service that helps organizations improve how they deliver software-defined products faster and sustainably. They combine a data analytics approach with a multidisciplinary consulting team to enhance the workforce's well-being.

## HOW WE DO IT?

- **Insightful Dashboards:** Our service provides comprehensive dashboards and reports, illuminating the engineering organization's production system.
- **Consultative Approach:** Our expert consultants identify root causes of inefficiencies, guiding organizations to rectify development, delivery, and maintenance process issues.
- **Evaluation and Optimization:** Backed by data, our senior consultants assist in designing, tracking, and evaluating actions to optimize identified root causes.

## OUR SERVICES

Organizations creating complex software-defined products and working at scale need advanced data analytics strategies to increase productivity and enhance employee well-being.

**Advanced Process Analysis:** In-depth research of the organization's product delivery process and decision-making mechanisms within engineering teams and management.

**Continuous Improvement:** Fostering a culture of ongoing enhancement across the entire organization, amplifying product delivery process excellence and team performance.

## Software Analytics for Delivery Performance Excellence

## WHAT SETS US APART?

- **Comprehensive Tooling:** includes practices, insights, capabilities, and tools that help companies develop and implement their data analytics strategy.
- **Accelerated Journey:** Speeding up the transition from monitoring to advanced data analytics, including identification of software delivery issues, discernment of symptoms from root causes, and design of impactful remedies.
- **Open Source based:** Embracing the open-source approach, fostering complete customer control over data, tools, and processes without any vendor lock-in.

## WHY CHOOSE US?

Our data-driven methodologies have been validated across various customer organizations and peer-reviewed research, fostering alignment, motivation, and a reduction in resistance for significantly improved operational efficiency. Our human-centric approach optimizes intricate systems, resulting in consistent enhancements in delivery mechanisms and improved workforce well-being.
